Power Climber Wind Installs 40 IBEX® 1000 Climb Assists at Nebraska Wind Farm

SEATTLE/BRUSSELS — Power Climber Wind, a division of SafeWorks, LLC, was selected as the preferred supplier of IBEX® 1000 Climb Assists for forty wind towers at the Flat Water Wind project located near Humboldt, Nebraska.

The IBEX® 1000 Climb Assists will be installed in 40 GE 1.5 MW turbines which will generate up to 60 megawatt wind power for Richardson County. Flat Water Wind Farm is owned by a division of one of the largest European operators and suppliers of renewable energy components.

The patented IBEX® 1000 Climb Assist puts the complete control over the climbing effort and experience into the hands of the climber, delivering personalized performance, increased safety, and better productivity in any tower. Unlike similar products on the market, the system responds to the climber's movement and behavior.

This intelligent system allows user-adjustable support settings at 50, 75, 100, and 125 lbs (23, 34, 45, and 57 kgs), and provides constant load support in both the up and down directions, regardless of climbing speed. It can be installed in any new or existing wind tower with straight-run ladders, whether tubular steel or lattice construction.

“Power Climber Wind is honored to have been selected for this new project with the multinational renewable energy operator and supplier,” said Mike Russell, National Sales Manager. “Flat Water is just the beginning of their aggressive growth plans for wind energy in the US and adds to our growing portfolio in the region. We are excited to supply and install our market leading IBEX® 1000 climb assists for their first North American project.”
