Power Climber Wind Provides IBEX® Climb Assist Systems in the United Kingdom

SEATTLE/BRUSSELS — Power Climber Wind, a division of SafeWorks, LLC, has installed 75 IBEX® Climb Assist Systems at wind plants in Scotland.

The IBEX® system puts complete control of the climbing experience in the hands of the wind turbine technician, delivering personalized performance, increased safety, and better productivity. The IBEX® 1000P utilizes a patented closed feedback loop and EasyClimb Controller, and features a lightweight, compact, portable control box.

Fred Olsen Renewables purchased a combination of IBEX® 1000s and IBEX® 1000Ps to install on turbines at three of its Scotland wind plants – Rothes I, Cristal Rig I, and Paul’s Hill.

“IBEX® is the market-leading climb assist globally, and we’re excited to see one of the leading wind project owners in the UK adopt it for their retrofit program,” says Edwin Holtkamp, Director of Sales – Power Climber International. “Repeat sales for new project construction as well as turbine retrofit efforts by leading global power producers testify to the level of customer satisfaction in this product and in Power Climber Wind. We anticipate IBEX® to earn the same reputation in this region.”

For more information on Power Climber Wind’s IBEX® climb assist, view our videos and brochures at <http://powerclimberwind.com/IbexOverview.aspx>.
