Power Climber Wind Selected by AES Wind Generation for IBEX® 1000P

SEATTLE/BRUSSELS — Power Climber Wind, a division of SafeWorks, LLC, was selected by AES Wind Generation to supply 100 units of IBEX® 1000P climb assist systems for GE 1.5 turbines at its 232.5MW Buffalo Gap II project in Merkel, Texas.

Recently released, 1000P IBEX® climb assist system sets new standards for portability and durability, and offers the same market leading performance of the IBEX® that users have come to expect. The system features a durable, technician-tested and approved portable control box, which weighs just 8.5 pounds/ 4 Kgs.

The 1000P's portable control box is easy to set up. Just click, plug and climb. The 1000P's EasyClimb Controller allows each user to customize assistance from 50 to 125 lbs (25 to 55 kgs), providing constant load support regardless of climbing speed and provides true down-climb assist. The system is designed to be installed in any wind turbine tower and significantly improves employee health and safety, as well as productivity.

"Our customers love the IBEX®, " said Mike Russell, National Sales Manager. "Now with a robust, truly portable control box, the IBEX 1000P saves the technicians from lugging much heavier, awkward control boxes from tower to tower; eliminating this hassle and exertion before they even start their climb. Power Climber Wind once again leads with the most innovative, durable products to get technicians to work productively."
